Painted Fishing Bait Brilliant Colors And Pattrn
Realistic Fishing Poppers With Life
Like Swimming Action To Attract Fishes

connection of steel wire

stable steel ball

About this item

- 【Specification】 Length: 4.53in/115mm; Weight: 1.55oz/44g; Swimming Action: Slow Sinking; Quantity: 2pcs/set
- 【Vibration Hard Lures】 Erratic side-to-side action make the swimbait incredibly realistic and lifelike, continuously emit the fish sound wave to provoke the feeding urge of the fishes and induce them to attack.
- 【2 Sharp Treble Hooks】 Durable high carbon steel treble hooks make it hard for target fish to escape.
- 【2 Segments Jointed lure】 More flexible when swimming in the water, vibrates like a wounded baitfish to attract the target fish to bite.
- 【Metal Ball Inside】 Easily control barycenter and cast far; making some noise when dragging the lure, which is more easily to attract the attention of target fish.

Features of Vibration Hard Lures:

Body Shape: Vibration lures typically have a slender, elongated body shape with a flat or slightly concave front. This design allows them to produce a distinct vibrating action when retrieved.

Internal Rattles: Most vibration lures contain one or more internal rattles or chambers that create noise and vibrations as they move through the water. These noises mimic the sound of baitfish or distressed prey.

Hooks: Vibration lures are equipped with strong, sharp hooks to improve hooking and landing rates.

Color and Finish: These lures come in various colors and finishes to mimic the appearance of natural prey species or to attract fish in specific water conditions.

Weight and Sinking Rate: Vibration lures come in different weights and sinking rates to help anglers target fish at different

depths. Heavier lures sink faster and are suitable for deeper water, while lighter lures are better for shallower areas.
